(54) MOBILE TERMINAL, BROADCASTING UNIT, AND INFORMATION SERVICE SYSTEM

COPYRIGHT: (C)2001,JPO

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a transmitter that serves diversified information to users in a facility.

SOLUTION: A host computer 14 in a facility such as a soccer ground or a ballpark collects and edits video images from cameras 16 installed at prescribed positions in the facility and supplies the edited images to the transmitter 12. The transmitter 12 broadcasts the video images through different channels in a form of a radio wave having a degree of strength that can be received only in the facility. A user audience uses a mobile terminal 10 at hand to receive a desired channel and to display it. In the case of voting on the most popular player or the like, each user enters data from the mobile terminal 10, which transmits the data to the host computer 14 via a wireless interface 22 and a network 24. The host computer 13 collects the data from the users and allows the transmitter 12 to broadcast the result of collection.
